

Contents

0.1	Preface	7
1	Descartes' Discovery	9
1.1	Local and Global Coordinates: 2D	10
1.2	Going from Global to Local	14
1.3	Local and Global Coordinates: 3D	17
1.4	Stepping Outside the Box	18
1.5	Creating Coordinates	19
1.6	Exercises	21
2	Here and There: Points and Vectors in 2D	23
2.1	Points and Vectors	24
2.2	What's the Difference?	26
2.3	Vector Fields	27
2.4	Combining Points	28
2.5	Length of a Vector	31
2.6	Independence	35
2.7	Dot Product	36
2.8	Inequalities	41
2.9	Exercises	42
3	Lining Up – 2D Lines	45
3.1	Defining a Line	46
3.2	Parametric Equation of a Line	47
3.3	Implicit Equation of a Line	49
3.4	Explicit Equation of a Line	53
3.5	Converting between Parametric and Implicit Equations	53

3.5.1	Parametric to Implicit	54
3.5.2	Implicit to Parametric	54
3.6	Distance of a Point to a Line	56
3.6.1	Starting with an implicit line	57
3.6.2	Starting with a parametric line	59
3.7	The Foot of a Point	61
3.8	A Meeting Place – Computing Intersections . . .	62
3.8.1	Parametric and Implicit	63
3.8.2	Both Parametric	66
3.8.3	Both Implicit	67
3.9	Exercises	68
4	Linear Maps in 2D	71
4.1	Skew Target Boxes	72
4.2	The Matrix Form	74
4.3	More about Matrices	75
4.4	Scalings	78
4.5	Reflections	80
4.6	Rotations	82
4.7	Shears	84
4.8	Projections	87
4.9	Areas and Linear Maps: Determinants	89
4.10	Composing Linear Maps	93
4.11	More on Matrix Multiplication	97
4.12	Working with Matrices	99
4.13	Exercises	100
5	2×2 Linear Systems	103
5.1	Coordinate Transformations	104
5.2	The Matrix Form	105
5.3	A Direct Approach: Cramer’s Rule	106
5.4	Gauss Elimination	107
5.5	Undoing Maps: Inverse Matrices	110
5.6	Unsolvable Systems	116
5.7	Underdetermined Systems	117
5.8	Homogeneous Systems	117
5.9	Numerical Strategies: Pivoting	119

5.10	Defining a Map	120
5.11	Exercises	121
6	Moving Things Around: Affine Maps	123
6.1	Affine and Linear Maps	124
6.2	Translations	125
6.3	More General Affine Maps	126
6.4	Mapping Triangles to Triangles	128
6.5	Composing Affine Maps	130
6.6	Exercises	132
7	Eigen Things	139
7.1	Fixed Directions	141
7.2	Eigenvalues	141
7.3	Eigenvectors	143
7.4	Special Cases	145
7.5	The Geometry of Symmetric Matrices	148
7.6	Repeating Maps	150
7.7	The Condition of a Map	153
7.8	Higher Dimensional Eigen Things	154
7.9	Exercises	156
8	Breaking It Up: Triangles	159
8.1	Barycentric Coordinates	160
8.2	Affine Invariance	162
8.3	Some Special Points	163
8.4	2D Triangulations	165
8.5	A Data Structure	166
8.6	Point Location	168
	8.6.1 Point Location Algorithm	169
8.7	3D Triangulations	169
8.8	Exercises	170
9	Conics	173
9.1	The General Conic	174
9.2	Analyzing Conics	177
9.3	The Position of a Conic	179
9.4	Exercises	182

10 3D Geometry	183
10.1 From 2D to 3D	184
10.2 Cross Product	186
10.3 Lines	191
10.4 Planes	192
10.5 Scalar Triple Product	197
10.6 Exercises	198
11 Interactions in 3D	201
11.1 Distance of Point and Plane	202
11.2 The Distance between Two Lines	203
11.3 Lines and Planes: Intersections	205
11.4 Intersecting a Triangle and a Line	207
11.5 Lines and Planes: Reflections	208
11.6 Intersecting Three Planes	209
11.7 Intersecting Two Planes	211
11.8 Exercises	212
12 Linear Maps in 3D	215
12.1 Matrices and Linear Maps	216
12.2 Scalings	218
12.3 Reflections	220
12.4 Shears	221
12.5 Projections	223
12.6 Rotations	226
12.7 Volumes and Linear Maps: Determinants	231
12.8 Combining Linear Maps	233
12.9 Inverse Matrices	236
12.10 Exercises	237
13 Affine Maps in 3D	239
13.1 Affine Maps	239
13.2 Translations	241
13.3 Mapping Tetrahedra	242
13.4 Projections	245
13.5 Homogeneous Coordinates and Perspective Maps	252
13.6 Exercises	255

14 General Linear Systems	259
14.1 The Problem	260
14.2 The Solution via Gauss Elimination	262
14.3 Determinants	269
14.4 Iterative Methods	270
14.5 Overdetermined Systems	272
14.6 Inverse Matrices	274
14.7 The LU Decomposition	278
14.8 Exercises	281
15 Putting Lines Together - Polylines and Polygons	283
15.1 Polylines	284
15.2 Polygons	285
15.3 Convexity	287
15.4 Types of Polygons	288
15.5 Unusual Polygons	290
15.6 Turning Angles and Winding Numbers	291
15.7 Area	293
15.8 Planarity Test	295
15.9 Inside or Outside?	296
15.10 Exercises	299
16 Curves	301
16.1 Parametric Curves	302
16.2 Properties of Bézier Curves	305
16.3 The Matrix Form	307
16.4 Derivatives	309
16.5 Composite Curves	311
16.6 The Geometry of Planar Curves	311
16.7 Moving along a Curve	314
16.8 Exercises	317
A Postscript Tutorial	319
A.1 A Warm-Up Example	320
A.2 Overview	323
A.3 Affine Maps	325
A.4 Variables	326

A.5	Loops	327
A.6	CTM	328
B	Selected Problem Solutions	333
B.1	Descartes' Discovery	333
B.2	Here and There: Points and Vectors in 2D	334
B.3	Lining Up – 2D Lines	334
B.4	Linear Maps in 2D	335
B.5	2×2 Linear Systems	336
B.6	Moving Things Around: Affine Maps	336
B.7	Eigen Things	337
B.8	Breaking It Up: Triangles	338
B.9	Conics	340
B.10	3D Geometry	340
B.11	Interactions in 3D	342
B.12	Linear Maps in 3D	342
B.13	Affine Maps in 3D	343
B.14	General Linear Systems	345
B.15	Putting Lines Together - Polylines and Polygons	346
B.16	Curves	346
